DETAILED ACTION

Claim Rejections - 35 U.S.C. § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1, 3, 51 are rejected under 35 U.S.C. 102(e) as being anticipated by Hui et al.(6,198,749).

With regards to claims 1, 51 Hui teaches a method for transmitting a communication from a first network entity to a second network entity, wherein the first network entity and the second network entity are coupled to a communication medium, comprising:

Art Unit: 2661

receiving a communication from a process operating on a first network entity(Fig. 4@22), wherein the communication is directed to a second network entity(Fig. 4@68); distributing elements of said communication into multiple portions(col. 5 lines 46-49); sending a first portion of said communication on a first channel(Fig. 4@28) established on a first communication medium coupled to said first network entity(Fig. 4@22 and said second network entity(Fig. 4@68); and sending a second portion of said communication on a second channel(Fig. 4@29) established on a second communication medium coupled to said first network entity and second network entity wherein said communication is transmitted to said second entity at a data rate in excess of one gigabit per second(col. 1 line 62, 1,560,000 bits per second)

With regards to claims 3 Hui teaches a method wherein said communication is an Ethernet frame and wherein each of said multiple portions of said communication comprises one or more bytes.(Fig. 4, Ethernet frames enter the inverse multiplexer and are split in two hence split into bytes).

Allowable Subject Matter

3. Claims 4-25, 28-31, 33-37, 39-50, 52-71 are allowed.
